

In the Abstract

Please amend abstract as follows:

ABSTRACT

A data management system and method use link information stored with a plurality of data segments. The data management system includes: a nonvolatile semiconductor storage section including a plurality of blocks capable of storing data; a storage control section for controlling a storage operation of the nonvolatile semiconductor storage section; a data management system control section for processing data to be stored in the nonvolatile semiconductor storage section; and a data management system memory section for storing management data, which is referred to by the data management system control section, wherein [[the]] The data management system control section performs data management by [[:]] dividing the data into data segments [[by]] in units of a sector which is a logical unit for data management; storing data link information which indicates the ordinal relationship of the data segments, together with the data segments, in the nonvolatile semiconductor storage section ~~via the storage control section~~; and storing, as link information in each sector, information about immediately-previous and immediately-subsequent data storage sites.
